

## Connect Access

Secure, flexible access to your network

- + **Flexible solution to suit your business requirements**
- + **Increase employee productivity** - provides access to your network from remote locations
- + **Reduce costs** - solution can be more cost effective than other access solutions
- + **Enforce IT policy** - consistent access for all users regardless of location
- + **Fully managed service** - allowing your resource to be focused where it is needed

What's  
in it  
for  
your  
business?

**Connect Access** is the ideal access solution for organisations with remote offices and users who require connectivity to the corporate network to access email, shared files and business applications.

Connect Access removes the issues often associated with current VPN (Virtual Private Network) services by delivering a solution that takes advantage of the benefits of ADSL/Broadband connectivity without the disadvantages associated with the Internet.

This solution removes the disadvantages other VPN access solutions can bring such as data traffic conflict, increased security risk, inconsistent performance and unfixed costs.

## Connect Access

### Your solution

#### + Do you have:

- Mobile workers
- Remote offices
- Home workers
- Contractors
- Partners

#### + Who require access to:

- Email
- Applications
- Databases
- Shared Files
- Internet

#### + Connect Access provides the solution

- More secure
- More reliable
- More performance
- Enforces IT policy
- Single & multiple user versions
- Cost effective

### Benefits

#### Flexible solution approach

Connect Access can deliver Internet connectivity as well as private ADSL connectivity, removing the need to implement separate solutions for both.

Where ADSL is not available, remote users can choose unmetered dial up or ISDN to provide **fixed cost access** through the same solution via Internet VPN.

#### IT policy

In a traditional Internet VPN environment, organisations have to accept that remote users will have direct access to the Internet. There can be little or no control over Internet usage the organisation can exercise in this scenario.

With Connect Access, Internet access can only be granted via the corporate network, allowing an organisation to enforce the same IT policy on remote users as for internal network users.

#### Security

Civica Connect provides a **fully managed** service, supported and maintained at our Secure Server Centre **24 hours per day**.

Call us to discuss how we can effectively connect your network users.
